

1 that has to be taken into account.

2 MR. COOPER: I have no comment.

3 COMMISSIONER NESS: Okay. Last question, and that  
4 is for me, at least. Who believes that the FCC has the  
5 authority, when the statute says that contribution to  
6 universal service should be from all telecommunications  
7 carriers serving interstate on a competitively neutral  
8 basis, that we can impose a end user fee in lieu of charging  
9 specific categories of carriers for universal service.

10 Does anyone support that position? You believe  
11 that we can statutorily do that, and that that would be  
12 sufficient with respect to carriers contributing to  
13 universal service.

14 MR. WELLER: Yes. I believe if you could  
15 establish a fee as the mechanism through which the carriers  
16 would recover their contributions, ultimately, the carrier  
17 contributions have to come from somewhere. And the more and  
18 clear and explicit those contributions are, the better, I  
19 believe.

20 COMMISSIONER NESS: If one were to -- I kind of  
21 fibbed out it being my last question. But following up on  
22 that question, if one were to impose an end user charge,  
23 what would put downward pressure on the amount that would be  
24 imposed? In other words, how could that be computed away?  
25 Would it be competed away, or could it be computed away?

1           MR. WELLER: Commissioner, several ways. First, I  
2 think that you haven't taken the money out of the system.  
3 You've attached it to a different transaction. Today it's  
4 attached to access transactions, but the cost is really  
5 determined -- generated by local service. So, what you've  
6 done is you've take the money and you've attached the  
7 universal service support to the local service transaction,  
8 and the support's portable. So, I lose local customers, I  
9 lose that money, which I should do, because it's the money  
10 that supports those local customers.

11           What shouldn't happen is for me to lose the  
12 revenue that supports the local customers when I lose access  
13 minutes which is what's happening today.

14           The other thing I'd mention to you is that, as you  
15 remember, I've also proposed that the support amount itself  
16 not be left as static. I think that a competitive bidding  
17 process over time is the way to make sure that we have --  
18 you've heard enough different opinions around this table, I  
19 think, to know one thing for sure, which is that you're not  
20 going to get exactly the right number when you finally do  
21 this. So, just in case we're wrong about this, we need to  
22 have another mechanism that will enforce market discipline  
23 on an amount. And I think competitive bidding is the way to  
24 do that.

25           COMMISSIONER NESS: Mr. Cooper, did you want to

1 respond?

2 MR. COOPER: I think we know that auctions don't  
3 always produce the right number. It depends on who's  
4 available, which competitors can enter the market. I'm fine  
5 with auctions after there's competition, but not before.

6 COMMISSIONER NESS: Thank you, Mr. Chairman.

7 CHAIRMAN KENNARD: Chairman Johnson?

8 MS. JOHNSON: Yes. My question is directed back  
9 to some of the questions that Mr. Lubin made, and perhaps,  
10 Mr. Brown, you'd like to follow up.

11 Mr. Lubin, I guess under your analysis of what  
12 truly costs to serve are one, you've concluded that the  
13 revenues generated from R-1 plus CLEC covers costs,  
14 generally. And that we could, in fact, reduce access by --  
15 substantially, immediately, and the world would be a better  
16 place.

17 Now, let's go to your world being a better place.  
18 So, what would that mean? And I don't mean to be flippant,  
19 but how will rate payers benefit? Who guarantees a flow-  
20 through, or will it be flow-through, or is there an  
21 obligation to flow it through? Could you respond?

22 MR. LUBIN: Sure. First of all, let me just ask  
23 one question. R-1 -- what is that?

24 MS. JOHNSON: Residential -- I think residential  
25 service. I'm sorry.

1 MR. LUBIN: Right. Okay. All right. I want to  
2 clarify something and than answer the specific question.

3 When we -- when I cited in my comments and than  
4 restated, and I said that if I look at the major LEC's and I  
5 look at the 69 -- I think it was 62 of 71 study areas had  
6 revenues in excess, that was looking at all revenues in  
7 terms of residents and business.

8 MS. JOHNSON: Okay.

9 MR. LUBIN: My belief is if I structured it, just  
10 for residents, you would see a similar thing, but you  
11 wouldn't see \$23 billion. You would see still a number  
12 that's greater.

13 MS. JOHNSON: I'm sorry. You said you would still  
14 see a number that's greater?

15 MR. LUBIN: I believe the answer is yes, you'd  
16 still see -- but the \$23 billion was really driven because  
17 business was included in that, and they looked at all local  
18 revenues including the interstate subscriber line charge.

19 The answer to your specific question in terms of  
20 follow the money and who will benefit, my view is  
21 ultimately, the consumer is going to benefit because those  
22 monies are going to be flowed through to lower prices for  
23 the consumer. And so, that's what I would expect to happen.  
24 That's what I would strongly see would happen.

25 MS. JOHNSON: Is that happening now?

1 collection, efficiency of distribution, we talk about an end  
2 user surcharge.

3 Other people talk about other mechanisms to do it.  
4 But the question is, what's most efficient, and where should  
5 the regulator be spending his or her time in terms of trying  
6 to create competition?

7 From where I sit, I see all the long distance  
8 companies. I see the revenue per minute declines on both  
9 business and residents, in the aggregate at least for AT&T,  
10 continually dropping of revenue per minute by billions of  
11 dollars, in excess of access.

12 My hope is that with your finite resources, that  
13 we try to figure out how to create local exchange  
14 competition and implement the rulings that have come out in  
15 August and in May of last year to try to create local  
16 competition. You know, sometimes I wake up in the morning  
17 and I say, "You know, we've got this huge debate. You know,  
18 is all the access being flowed through?" And I'm not  
19 suggesting this, because right now I don't have authority to  
20 suggest it.

21 But sometimes I wake up and I say, "Goodness  
22 gracious. We've got all these issues, universal service,  
23 local exchange competition." Sometimes I ask myself, "Are  
24 we just better off putting access on the bill and just  
25 letting that be on the bill? And as access comes down or

1 goes up, just let it rip in terms of lower access."

2 Now, my fear is if that if somebody ever did that,  
3 you know, they would see rates in terms of various parts of  
4 the country that people really wouldn't want to see. And  
5 so, you know, I wake up sometimes saying, "Boy, I wish I  
6 could get out of this dilemma and this food fight." And  
7 that's how I see getting out of it.

8 And then I say, "But you know, if people really  
9 wanted to do that, you know, are they willing to accept the  
10 consequences of those actions?" Because, you know, in  
11 certain areas, it would really look nice. In other areas,  
12 it wouldn't look nice, because currently access is  
13 significantly de-averaged in this country.

14 MS. JOHNSON: Well, one of the points that Mr.  
15 Brown raised as we look at this, and you're right. The  
16 competitive market can give us some surprises. And as we  
17 transition into a competitive market, what should be the  
18 role of the legislator -- or regulator? Mr. Brown had  
19 suggested, "Well, maybe we shouldn't be so concerned about  
20 getting access to cost immediately, because having higher  
21 access will actually promote innovation and creativity and  
22 the market, and people will want to build these facilities."  
23 As a transitional step, maybe we shouldn't go directly to  
24 costs because maybe that will be your distance in it.

25 Could you respond to that?

1 to R-1 customers? Should we be able to do that? Or can  
2 regulators do that, either Fed or states? And if the answer  
3 is yes, should they be able to do that?

4 MR. LUBIN: It's always hard for me to say what a  
5 regulator should and shouldn't do or what the legal  
6 ramifications are saying one should or shouldn't do. Since  
7 I'm not a lawyer, I can't attest to the legal ramifications  
8 of that. But in terms of the spirit of the question, it  
9 seems to me that we have over the last -- I don't know, 10,  
10 15 years, moved to create competition in the LD marketplace.

11 And someone earlier said -- I think it was  
12 Commissioner Power, who at least alluded, at least if I  
13 understood it correctly, is that competition gets to be a  
14 very messy process. And when you're in a competitive  
15 marketplace, prices move toward costs. And as they move  
16 toward costs, then we access reductions. My view is those  
17 will get flowed through. And as you see more and more  
18 competition, at some point you may see in certain particular  
19 areas, prices move up.

20 And I'm not suggesting right now that an IXE is  
21 going to raise prices. All I'm saying is competition is an  
22 extremely messy process. And ultimately, it seems to me  
23 some questions should be asked in terms of -- you know, what  
24 are the most efficient ways of recovering some of these  
25 costs? And when I talk about efficiency and sufficiency of

1 MR. LUBIN: In my opinion --

2 MS. JOHNSON: With respect to access going down?

3 MR. LUBIN: Yes. With regard to AT&T, that's all  
4 I can speak for, is that we have continued to see that our  
5 revenues have declined significantly more than the access.  
6 We've seen that for the last several years, and we expect to  
7 see that on a continual basis.

8 So, the bottom line in terms of who benefits, I  
9 believe the consumer will benefit. And I believe the  
10 consumer will benefit by billions of dollars.

11 And by the way, I think ultimately, all of that's  
12 going to stimulate the pie so that the pie is simply bigger  
13 and bigger and bigger.

14 MS. JOHNSON: Is there a check and balance, or is  
15 there a mechanism by which the FCC can measure or the states  
16 or some regulatory body could measure the flow-through?

17 MR. LUBIN: Well, what we've done up to this point  
18 in time is respond to a Chairman letter that asked us, in  
19 terms of what has happened. We responded and showed that  
20 the revenue net of access has declined, at least for AT&T,  
21 significantly above and beyond access.

22 MS. JOHNSON: Should a regulatory body, FCC,  
23 states, be able to structure or require certain reduction,  
24 that the flow-through certain percentage must be applied to  
25 residential customers? Certain percentage should be applied

1           MR. LUBIN: Wonderful question from my point of  
2 view. And it's a tough question because it basically gets  
3 to the heart of, how do you want to manage the public policy  
4 issues? And you know, in May of 1997, the Commission came  
5 out with an order, a set of orders that addressed USF and  
6 access, and said, "Hey, let's go to that soft-landing  
7 approach, and let's get this checklist implemented." And  
8 thereby, giving everyone the opportunity of buy unbundled  
9 network elements disaggregated, and maybe even matching USF  
10 consistent with the level of geographical deaveraging of the  
11 loop, and let's be on with it.

12           Quite candidly, I thought that was a very rational  
13 approach. The dilemma is we put all of our eggs in one  
14 basket. That is, the basket of making the checklist truly  
15 operational. And for whatever reason, it's hard to  
16 legislate cooperation or to regulate cooperation. And I'm  
17 not saying anybody's doing bad things. It's just hard.

18           And my bottom line is, it's not working. And so,  
19 now you say, "Well, should I -- it's not working. Local  
20 competition isn't working. Should I keep access umbrella  
21 high to create the incentive? But what's the incentive if  
22 the piece parts aren't truly operational. What you do is  
23 the small CLEC will come in and slowly enter the market, but  
24 it's years and years. And so, I come back to the Chairman  
25 in terms of follow the money. You know, people will say,

1 "Well, you're just going to pocket the money, and you're not  
2 going to flow it through." You can debate that.

3 But my view is follow the money and get it into  
4 the consumers hands sooner rather than later, and from my  
5 point of view, again, the key most critical area in terms of  
6 defining USF is the level of aggregation. If you go to the  
7 study area, my view is you're going to see a small fund. If  
8 you go below that, you're going to see, potentially, a  
9 larger fund. And then, bottom line is from my point of  
10 view, is to get access prices down, consumers will be far  
11 better off.

12 Sorry for taking the time.

13 CHAIRMAN KENNARD: Could I just tie one thing down  
14 from your answer, Joel? Am I to take from that response on  
15 flow-through, that you're not flowing through access  
16 reductions on a proportionate basis? That you're flowing  
17 them through, but you're not flowing them through to the R-1  
18 consumers, necessarily?

19 MR. LUBIN: No. I'm glad you clarified the  
20 question. And my answer is and what we have shown is that  
21 we're flowing through more than the access reductions that  
22 we see. And my view is, that has been true for the last  
23 several years. In my view is the residential market also  
24 has seen access reductions and seen the benefit of those  
25 reductions. But when I said in aggregate, the aggregate --

1 I can't remember the number offhand. But the letter I think  
2 we highlighted was well in excess of a billion dollars.

3 I will say that this proportion amount of that in  
4 excess of the access reductions went into the business-side  
5 of the equation, but that isn't to say their fair share.  
6 And I would also highlight to this Commission and the Joint  
7 Board members, is that when we got price caps in the --  
8 whenever -- I lost track, the mid-80s, late '80s, what we  
9 found is the price cap was disproportionately lowering the  
10 residential side of the equation.

11 That isn't to say, you know, that's bad or good.  
12 That's just simply to say, make the observations that when  
13 there was regulation in the heavy hand even though it was  
14 price-capped, the way in which it was implemented  
15 disproportionately lowered that into the residential  
16 marketplace. But my view is -- bottom line is, well in  
17 excess of access in both for business and residence, but  
18 disproportionate to business.

19 CHAIRMAN KENNARD: Thank you. Commissioner  
20 Furchtgott-Roth?

21 COMMISSIONER FURCHTGOTT-ROTH: Thank you, Mr.  
22 Chairman. This has been just a wonderful session. I've  
23 learned a lot. And I see we're probably going to miss our  
24 break for lunch. But I will keep my comments very short.

25 In part, because in setting up this meeting, I

1 know Chairman Kennard was very sensitive to the concerns of  
2 the states who very much wanted an opportunity to address  
3 questions to the panel that's here today. You've all done  
4 just a wonderful and very thoughtful job in making your  
5 presentations today, probably more than I have completely  
6 absorbed in the past couple of hours. But I look forward to  
7 trying to absorb them more in the coming weeks.

8 I just want to make a couple of points. There are  
9 too many of you for me to ask questions, and while I'm  
10 attempted to follow Commissioner Ness's lead, I'm probably  
11 not as good at asking the questions.

12 I hope all of you will leave today with two  
13 salient memories. One is that you addressed your comments  
14 to presentation before both Federal and state commissioners.  
15 And that a lot of the issues related to high cost ultimately  
16 involved consumers. They ultimately involved consumers in  
17 local telephony.

18 And the first point of Government oversight of  
19 local telephony is today. And I think what will remain in  
20 the dim and distant future, state regulators. It is to them  
21 and probably not to the Federal Communication Commission,  
22 that consumers will look first on matters of local telephone  
23 service. And frankly, just probably to the state regulators  
24 that telephone service providers will look first on matters  
25 of local telephone service.

1           We have a very difficult job before us, both at  
2     the Federal level and at the state level. I would urge all  
3     of you to work closely both with the Federal and state  
4     regulators. We've heard today presentations of 11 different  
5     plans, each of which, frankly, have a lot of merit.

6           At the end of the day, I am not at all certain  
7     that a single plan is going to be the best for every state  
8     or is going to be the best for every consumer. And it's  
9     quite possible that different states may, ultimately, adopt  
10    different plans. And that is entirely consistent with the  
11    Act, which envisions state universal service plans.

12           And I think it is entirely consistent with the Act  
13    that those issues need to be resolved before any of the  
14    other elements of universal service and 254 can be fully and  
15    adequately addressed. Thank you, Mr. Chairman.

16           CHAIRMAN KENNARD: Thank you, Commissioner.  
17    Commissioner Schoenfelder?

18           COMMISSIONER SCHOENFELDER: How many questions can  
19    I ask? Are we going to have time this afternoon for some  
20    questions?

21           CHAIRMAN KENNARD: Yes, we can continue on this  
22    afternoon.

23           COMMISSIONER SCHOENFELDER: Because I have  
24    several. But one of the things that I'd like to ask all of  
25    you who are local exchange carriers is -- and you can answer

1 it one at a time or collectively. But I quite often hear  
2 and I've been hearing since we started this process that  
3 there's definitely a subsidy flow from business to  
4 residential, from business to local, however you want to  
5 call that.

6 I want to know if anyone -- and I'm looking at Mr.  
7 Brown now and since that's my local RBOC, he's going to get  
8 picked on, but I really want to know if anytime during your  
9 calculations you've ever taken traffic use or minutes of use  
10 into account when you talk about that subsidy flow, because  
11 if I am -- and I'm going to use my own state as an example.  
12 Citibank in Sioux Falls, South Dakota, and I'm Joe Sixpack  
13 on the corner, my traffic is going to be a lot different.  
14 And when you calculate, do you ever calculate minutes of use  
15 or traffic into that equation, and how you would you do it  
16 if you did it?

17 MR. BROWN: In the cost studies that we would file  
18 with the South Dakota Commission, yes, usage would be a  
19 component. It tends to be a relatively small component  
20 because we've switched to large switches. It tends to vary  
21 between customers. If you looked at my daughter's  
22 residential usage, who's a teenager, you'd probably find  
23 that she rivals many businesses. So, there's a mix.

24 But if I were to come to you and present a study  
25 for business and residents, it would have the usage built

1 in, based upon averages, of course. And that's one of the  
2 problems with studies.

3 In the models that Joel's company and mine and  
4 actually several others on this panel have been working on,  
5 we tend to look more at what drives high cost. And that's  
6 the loop cost. So, there is usage in there but not with the  
7 granularity to answer a question like you just asked.

8 COMMISSIONER SCHOENFELDER: Anyone else? Okay.  
9 Then, as long as you're in front of me, in your new  
10 proposal, what is the size of the fund you're advocating?  
11 Can you quantify that?

12 MR. BROWN: Yes. Let me give you some numbers.  
13 These are going to be based on the common inputs. When  
14 model sponsors filed their models, they had default inputs.  
15 And frankly, we haven't looked at the inputs until just now  
16 because over the past year, we've been looking at the  
17 platform of the model. But the staff, I think, did a very  
18 good job of kind of looking at what we had both put on the  
19 table, and they came up with what I think are some middle  
20 ground estimates, cutting the baby in half, in many  
21 respects.

22 If you look and you run the benchmark cost proxy  
23 model or at the national aggregate, if you run the HAI  
24 model, you come up with a fund of roughly \$4.5 billion to  
25 cover 100 percent of the cost above \$31 for residents and

1     \$51 for business. Those are the numbers that were in the  
2     May decision.

3             That would say, under the 25/75, the Federal fund  
4     would be about \$1.1 billion or 25 percent. When you run the  
5     IHCAP or the two benchmark at 30 and 50, what you get is an  
6     interstate fund of \$2.8 billion. That is 1.7 higher than  
7     existed under the 25/75. And the genesis for that is taking  
8     75 percent of all of the costs over 50 dollars and moving  
9     them into the interstate jurisdiction.

10            In a sense, it's like the USF works today. When  
11    costs exceed 115 percent of the nationwide average, they're  
12    removed from the state jurisdiction and moved to the  
13    interstate jurisdiction and recovered through the fund.

14            What we're proposing is very analogous to that,  
15    and instead of 115 percent, you put loop costs from  
16    forwarding looking proxy model at a small area of geography  
17    above \$50. But the mechanics beyond that are similar.

18            COMMISSIONER SCHOENFELDER: Let me follow up.  
19    Now, we're focusing today on non-rural companies. Are these  
20    non-rural numbers?

21            MR. BROWN: This is non-rural only.

22            COMMISSIONER SCHOENFELDER: And so, you still  
23    haven't added the rural component into the figures?

24            MR. BROWN: No. But I think the current fund for  
25    rural companies -- see, the whole name of the game in

1 universal service funding is targeting to the areas where  
2 the high cost customers are. By historical accident if  
3 nothing else, and I think it's the reason why a small  
4 company is this in many places. They are small. They don't  
5 have urban areas to offset costs on, so I think the current  
6 funding for the rurals is a reasonable benchmark for what  
7 they would need.

8 COMMISSIONER SCHOENFELDER: Mr. Lubin, yes?

9 MR. LUBIN: Commissioner, I'd just like to make an  
10 observation in terms of the various plans relative to the  
11 current fund. The current fund is about \$1.7 billion.  
12 That's the high costs, LTS and DEM. And then you have the  
13 various proposals that are being presented, and you have  
14 people looking at, calculating at a, let's say a serving  
15 wire center or a state average or, if you listen to us, it  
16 would be a study area. Just to give you a reference point.

17 The current FCC plan, the 25/75, would probably  
18 raise the money by about \$400 million relative to the  
19 current plan. If you went to study area instead of serving  
20 wire center, it would be roughly comparable.

21 If you look at the majority member plan or the  
22 U.S. West plan, what we see is that if you use either --  
23 again, the U.S. West Plan or the majority plan, you would  
24 still see about a billion dollar increase if you were at the  
25 serving wire center. So, instead of 1.7, you're at 2.7.

1           The interesting -- I'll use the word phenomena.  
2   This stuff always amazes me -- is that if you use the study  
3   area on the U.S. West plan, you come back to roughly the  
4   \$1.7 billion number. If you use the majority plan, you come  
5   back at a study area level, roughly \$2.2 billion. So, that  
6   case would be roughly \$500 million.

7           My only message is that a key, key component are  
8   the input parameters and the level of aggregation that you  
9   use when you determine the fund, because you can use a level  
10   of aggregation that all of a sudden greatly changes that  
11   overall level of subsidy.

12           MR. BROWN: But whenever you hear the word  
13   aggregation, think implicit support. Think averaging. And  
14   the Act says you need to rely less on implicit support. The  
15   reason for that is that the urban areas --

16           COMMISSIONER SCHOENFELDER: I don't think the Act  
17   says that. I think the Act says that universal service  
18   should be explicit. I don't think it says anything about  
19   implicit support.

20           MR. BROWN: But in terms of measuring for explicit  
21   support is what we're talking about, the competition is  
22   going to hit first in the urban areas. You're going to have  
23   to reduce your prices toward costs faster there so you're  
24   not going to be able to average across the study area as  
25   Joel is suggesting when you use study area aggregation.

1 I have concerns even at the wire center, because  
2 within the wire center, you've got customers on Main Street  
3 that cost \$10, \$20 a month, even in an exchange that might  
4 cost on average, \$100 a month. Do we want to throw, you  
5 know, a \$70 or a \$50 subsidy at a customer that costs \$10 or  
6 \$15 or \$20 a month? I think that -- this whole area of  
7 aggregation deserves some very thoughtful consideration.  
8 But you can't just change your level of aggregation and not  
9 have other consequences.

10 COMMISSIONER SCHOENFELDER: Joel?

11 MR. SHIFFMAN: One thing that I think has been  
12 said which is somewhat confusing and might give the wrong  
13 idea is that the existing fund with its existing level of  
14 aggregation as Mr. Lubin talked about, meets the objectives  
15 of the Act.

16 And I guess that's one of the ad hoc's serious  
17 concerns is that the existing fund or even if the -- if the  
18 FCC went ahead and said, "We're just going to forget about  
19 this whole thing. Just leave the fund exactly like it is,"  
20 we don't believe that even with that -- notwithstanding, the  
21 issue of competition, that the existing fund provides  
22 sufficient funds to afford comparable and affordable rates.  
23 And the reason that that is, is that -- and we did  
24 considerable regarding this.

25 That areas like Vermont and Maine and West

1 Virginia, which have large companies serving predominantly  
2 rural areas, get only pennies on the dollar to the extent  
3 that their costs exceed the national average, compared to  
4 similarly situated states that are served by small  
5 companies.

6 And that the combination of 200,000 line problem,  
7 the lack of switching recognizing really high switching  
8 costs are now being tied to company size, and the lack of  
9 anything in the high cost current fund recognizing high  
10 interoffice trunking costs, that those three factors put  
11 together create a situation where the existing fund, the  
12 status quo can't meet the standards and the objectives of  
13 Section 254.

14 Although, we've argued in pleadings that the 25/75  
15 cannot meet the comparability and affordability objectives.  
16 But similarly, that even if we don't change the aggregation,  
17 the existing fund, the status quo, cannot comply to comport  
18 with the requirements of the Act.

19 COMMISSIONER SCHOENFELDER: Mr. Chairman, I have  
20 more, but I'll quite right now.

21 CHAIRMAN KENNARD: Okay. Well, you'll have some  
22 more time this afternoon. Commissioner Powell?

23 COMMISSIONER POWELL: In the interest of your  
24 schedule, I'll be happy to defer my questions until later.

25 CHAIRMAN KENNARD: Okay. Thank you. And with

1 that, why don't we take our lunch break, and we'll reconvene  
2 here at 2:30. Thank you all very much.

3 (Whereupon, at 12:45 p.m., the meeting recessed,  
4 to reconvene this same day, Monday, June 8, 1998, at 2:30  
5 p.m.)

1 because some people ask us, have we changed our position  
2 with regard to the proxy tool? And our answer to that is  
3 no. We would hope, quite candidly, that the Commission make  
4 a decision on the proxy tool. We think the Hatfield, HAI,  
5 tool is a very flexible tool. We think it's very open. And  
6 it's using information that's public such that as more  
7 public information becomes open, you can modify and update  
8 the answers if better data becomes available.

9 It's also a tool that attempts to geocode the  
10 locations such that it's looking at a hundred million  
11 customer's specific locations, and it's attempting to  
12 geocode as many of them as humanly possible. Geocoding  
13 simply means looking at latitude and longitude of a customer  
14 location.

15 All that being said, we think it's right, quite  
16 candidly, to make a decision on the proxy tool. We would  
17 hope that it would be the Hatfield tool.

18 Where there is a difference in terms of what we  
19 have said in the past, I'll say a year ago versus today, is  
20 given the state of local exchange competition, we would  
21 suggest that the level of aggregation be the study area,  
22 again, because we don't see UNE's disaggregated at a wire  
23 center, or some states only have one unbundled network  
24 element rate. And so, I want to separate the issue of  
25 aggregation versus selection of a model, and a proceeding

1 that I believe the FCC has under way in terms of trying to  
2 figure out what are the other input parameters to go into a  
3 model that hopefully is open and people could evaluate, et  
4 cetera.

5 All that being said, the next question we said is,  
6 "You know what? Even if you pick the proxy tool, even if  
7 you select study area, you really don't have to implement  
8 this until you see local exchange competition." And so, the  
9 final, at least the question I think I'm hearing you, you  
10 know is, when is that?

11 We've identified a set of metrics that we have put  
12 in our May 15 comments that would suggest, from our point of  
13 view, is again, the Commission has a series of orders trying  
14 to implement unbundled network and OSS's, et cetera, because  
15 we would hope those things get implemented. And that,  
16 ultimately, now a test we would say is, "Okay. Get it  
17 implemented." Once we see some penetration, I think we've  
18 put in a number of 15 percent penetration. That's  
19 indicative that this process is working.

20 But we would even go one step further in our  
21 comments. We said that, "By the way, even if you lose 15  
22 percent, there's still may not be an earnings problem, and  
23 you ought to evaluate whether there's truly an earnings  
24 problem before you implement." And we suggested that the  
25 earnings problem could be evaluated based on the FCC's low

1 end adjustment on price cap regulation.

2 So, those are the things we have said in the  
3 record.

4 MS. HOGERTY: Okay. And you've also said that,  
5 based on your study, you believe that local revenues when  
6 you look at all the revenues, are greater than the forward  
7 looking costs in those areas as you have aggregated --

8 MR. LUBIN: Yes. For the major local companies,  
9 we have put in the record, we --

10 MS. HOGERTY: For the large companies?

11 MR. LUBIN: Right. Sixty-two out of seventy-one  
12 study areas, that is true when you include local revenues  
13 including the interstate subscriber line charge.

14 MS. HOGERTY: Okay. And from that you have said,  
15 therefore, access is not necessarily a subsidy.

16 MR. LUBIN: Correct.

17 MS. HOGERTY: Well, what is it?

18 MR. LUBIN: Well, I mean, you can hear Lubin's  
19 view or AT&T's view is that we think there's a lot of excess  
20 that is in access. We would urge the FCC to immediately  
21 lower those prices, set a proceeding. We believe that the  
22 productivity factor, even though it's at 6.5, and we commend  
23 the Commission for going up from where it was to 6.5. We  
24 think using the own FCC data, could support a 9.3 or 8.4  
25 percent productivity offset, reinitialize that to 1995 would
